SCOPE OF WORK

We managed construction while self-performing preconstruction services, overall survey and construction layout, 83,420 cubic yards of bulk earthwork, 25,700+ linear feet of underground storm-water, water, and sanitary lines, paving, landscaping, and off-site infrastructure work.

We also were responsible for running a new sewer line connecting directly with the Quarryville sewer plant, which required boring underneath existing rail lines.

PROJECT SIZE

51 LOTS

CONTRACT VALUE

\$3,640,733

DURATION

1 YEAR

PROBLEM SOLVED

This project demonstrated the team's commitment to every aspect of our promise. We were able to deliver the project on time and under budget with everyone going home safe every single night. Because our out success with the first project phase, we were able to secure the remaining three phases of construction and deliver home sites ahead of the owner's timeline.

“After working with your company for several years doing bigger projects, I would highly recommend your company to do site work. It's been a positive experience working with your company and I would definitely work with you again. I feel you've been fair with me and any change orders or additional work!

JOE NADU, OWNER
